Executive Summary

This research project seeks to estimate a financial valuation for onshore wind farms in Ireland. It will develop decision support tools which will assist wind farm managers to decide between decommissioning, repowering and life-extension for the end-of-life of a wind farm, depending on the valuation for each. This research will also assist local communities who may be interested in buying part or all of their local wind farm and owning their own energy source.

A social media channel, Twitter (@windvalue) [Twitter Account](#) and a website <https://windvalue.ie/> were set up to help to disseminate the output of the project and to facilitate engagement with stakeholders. Both the social media and website activity exceeded their targets for the first deliverable dated August 2022.

1 Introduction

The purpose of the project website <https://windvalue.ie/> and the Twitter Account @Windvalue, is to disseminate the output of the project and to facilitate engagement with stakeholders. In order to make the best use of these channels of communication both accounts were used to highlight topical news items and items of interest so as to attract interaction from stakeholders and the public. This approach appears to have been successful.

2 Social Media

2.1 Metrics and Targets

As specified in the funding application Gantt chart, the number of Twitter followers will be the metric used to chart the progress of the social media.

2.2 Results

The targets for the social media interaction was exceeded in the first reporting period from 1st March visits were exceeded.

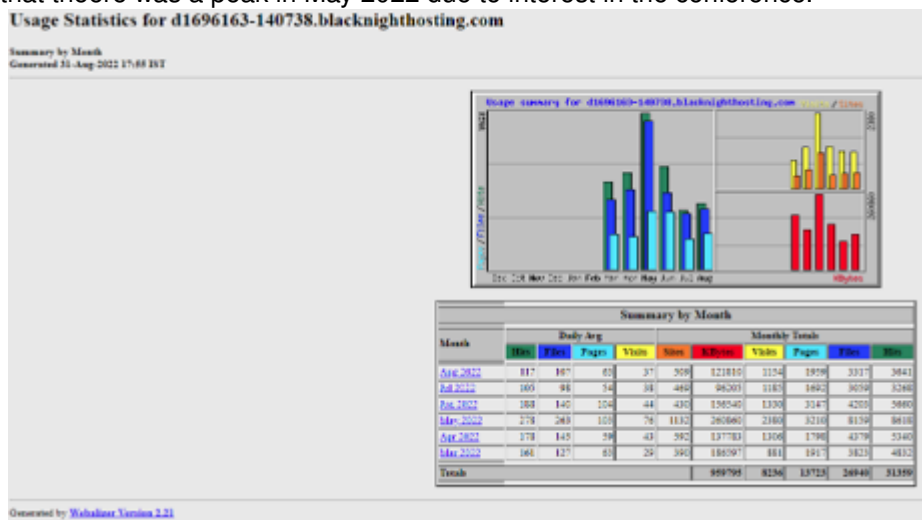

3 Website

3.1 Metrics and Targets

As specified in the funding application Gantt chart, the number site visits will be the metric used to chart the progress of the website. These were measured Blacknight, the company which hosts the website, using Webalizer Version 2.21. The numbers reported divided into all visits, and visits from secure URLs. It is common practice for more serious websites (such as ours) to obtain secure URL addresses. It is also common for many browsers to avoid sites without such accreditation.

3.2 Results

The number of visits to the website was much higher than the target set in the funding application. It is notable that there was a peak in May 2022 due to interest in the conference.

4 Conclusion

The social media outreach and the website are exceeding the targets set as measures of their success. While this is encouraging it does not mean that improvements cannot be made by perhaps using other channels of social media in the future.
